## SUMMARY

Motivated Computer Science and Statistics undergraduate at the University of Sri Jayawardenepura with a strong interest in software engineering, AI, and machine learning. Skilled in building modern web applications using the MERN stack, with a good foundation in programming, statistics, and problem-solving. Passionate about learning new technologies and developing practical software solutions that are useful, reliable, and user-friendly.

## TECHNICAL SKILLS

- Programming Languages: *Java, JavaScript, Python*
- Frontend Development: *HTML, CSS, React.js, Tailwind CSS, Bootstrap*
- Backend Development: *Node.js, Express.js, REST API Development*
- Databases: *MongoDB, MySQL*
- AI / Machine Learning: *NumPy, Pandas, Scikit-learn, Machine Learning and AI Basics*
- Tools & Platforms: *Git, GitHub, VS Code, Postman / Thunder Client, Jupyter Notebook*

## EDUCATION

- **Faculty of Applied Science, University of Sri Jayawardenepura**  
Subject Combination: Computer Science, Statistics, Mathematics
- **SLIPD Academy, Advance Python course.**

## CERTIFICATIONS

- PyData Sri Lanka workshop series conducted by PyData Sri Lanka, at the University of Sri Jayawardenepura. [certificate link](#)
- Advance Python Course, Machine learning and AI. [certificate link](#)

## PROJECTS

### 1. Sentiment Analysis Web Application

Developed a machine learning-based web application to predict whether product feedback is positive or negative. Built the model using Python, Pandas, NumPy, Scikit-learn, and Naive Bayes, and connected it with a simple Flask web application to display positive and negative review counts.

### 2. Smart POS System

Designed and developed a MERN stack Point of Sale system for supermarket operations. The system includes product management, cart handling, discount calculation, checkout, sales reports, dashboard charts, and role-based access for admins and cashiers.

### 3. MERN Authentication System

Built a secure MERN stack authentication system with user registration, login, JWT authentication, protected routes, form validation, and role-based access for admin and customer users.

### 4. Care Alert – Hospital Queue Management System (Group project)

Built a real-time hospital queue management system using React, Firebase, Arduino ESP32, and a wearable IoT device. The system helps hospital staff monitor patient alerts and queue updates through a cloud-based web platform

## SOFT SKILLS

- *Problem Solving*
- *Team Collaboration*
- *Communication*
- *Time Management*
- *Adaptability*
- *Critical Thinking*
- *Attention to Detail*
- *Self-Learning*

## LANGUAGES

- Sinhala
- English
